Laser & IPL Hair Removal

Is a non-invasive permanent hair removal alternative for your whole body.

With Laser & IPL Hair Removal you can finally be hair free

Laser hair removal is a cosmetic procedure that uses a powerful laser or intense pulsed light (IPL) to remove unwanted hair. This light source heats and destroys hair follicles in the skin, which suppresses hair growth. Using the latest machine and top specifications, this technology banishes all of your unwanted hair forever.

- Face
- Neck
- Chest
- Abdomen
- Arms
- Legs
- Hollywood
- Back
- Buttocks

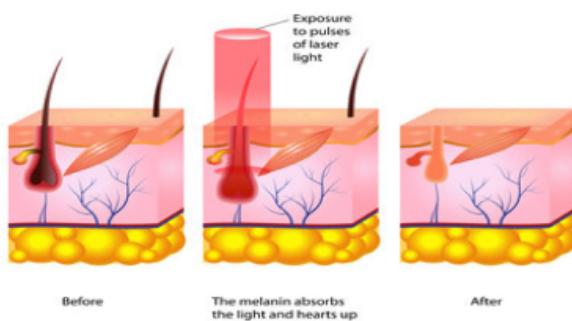

How it works?

The light energy is attracted and absorbed by the melanin, which gives the colour of your hair. Once the light is absorbed it is converted into heat which then heats up the hair follicle structures and suppresses the hair growth. Hair must be present in the follicle, in order for the treatment to work and this is why we ask you not to Wax, pluck or thread hairs.

After a free consultation with us, you will receive a personalised treatment plan, which takes between 30 minutes to 1 hour to discuss. Once this plan is finalised, we will provide you with documents covering pre-treatment preparation and aftercare instructions. You will also be scheduled for your next appointment.

Please note that multiple treatment sessions may be required, and these are tailored individually to each client.

Your results

Results are not immediately visible - IPL might take up to 3 weeks for the hairs to shed (as they still remain in the follicle) - some will be vaporised immediately and some will shed in the following 3 - 7 days.

After your treatment

- The area treated should be kept clean and dry
- If the skin feels warm and tender apply a cool compress, Aloe Vera gel or other post-laser preparations.
- Avoid touching the area treated.
- No heat treatments for 4-5 days.
- No hot baths for 4-5 days.
- No exercise for 24 hr.
- Do not apply perfumed products to the area for at least 24 hr.
- No sun beds for the duration of the course and for 2 weeks after.
- No sun exposure for a minimum of 4 weeks before treatment.
- Wear SPF 30+ minimum on the treatment area.
- No self-tanning products for 2 weeks before treatment and 7 days after the treatment.
- Wear loose clothing to avoid friction.
- Do not wax, depilate, and no threading on the area.
- Shave between treatments or cut with scissors
- Bleaching creams if used: 7 days after treatment and no later than 2 weeks before the next appointment.

Warning Signs to Watch For

- Excessive redness or swelling lasting more than 48 hours
- Blistering or open sores
- Signs of infection, such as pus or severe pain

If you experience any of these symptoms, it's important to contact your treatment provider immediately.

By following these aftercare instructions, you can help ensure a smoother recovery and better results from your laser hair removal treatment. If you have any questions or concerns about your specific situation, don't hesitate to reach out to your healthcare provider.

Price list - Laser Hair Removal

Your treatment sessions can be paid for in instalments, as arranged with your therapists

Laser & IPL Skin Rejuvenation

With Laser & IPL Skin Rejuvenation you will enhance your skin's radiance & promote smooth, youthful and a glowing complexion

Laser and IPL Skin Rejuvenation treatments are an excellent way to achieve youthful and vibrant skin. These treatments use high-tech lasers and intense pulsed light (IPL) to stimulate collagen production, which improves skin tone and texture, reduces wrinkles and fine lines, and minimises pigmentation and age spots. We also treat thread veins.

- Skin tightening
- Thread Vein
- Rosacea
- Acne
- Scarring
- Hyper pigmentation
- Black Baby Facial

3 Amazing Benefits of IPL Skin Rejuvenation

Tightens Skin

IPL skin rejuvenation uses light energy to stimulate the body to naturally increase collagen production, which tightens the skin while reducing wrinkles.

Anti-Ageing

Regular treatments help slow down the natural ageing process, to keep skin looking younger and firmer for longer.

Removes Blemishes

Blemishes such as unwanted pigmentation and thread veins are reduced to reveal a more even skin tone and youthful complexion.

How it works?

Imagine your skin like a house with some wear and tear over time. Laser skin rejuvenation is like giving that house a makeover. The laser sends tiny beams of light deep into your skin. These beams stimulate your skin cells to produce more collagen and elastin, which are like the building blocks that make your skin firm and smooth.

Your results

As a result, your skin starts to look younger and healthier because it's repairing itself from the inside out. It can help with things like reducing wrinkles, evening out skin tone, and reducing the appearance of scars or sun damage. And the best part is, it's non-invasive, meaning there's no cutting or needles involved. It's like giving your skin a refreshing boost to help it look its best.

After your treatment

- The area treated should be kept clean and dry
- If the skin feels warm and tender apply a cool compress, Aloe Vera gel or other post-laser preparations.
- Avoid touching the area treated.
- No heat treatments for 4-5 days.
- No hot baths for 4-5 days.
- No exercise for 24 hr.
- Avoid using make up in the area straight after as this cause clogging of pores.
- Do not apply perfumed products to the area for at least 24 hr.
- No sun beds for the duration of the course and for 2 weeks after.
- No sun exposure for a minimum of 2 weeks before treatment.
- Wear SPF 30+ minimum on the treatment area.
- No self-tanning products for 2 weeks before treatment and 7 days after the treatments.
- Bleaching creams if used: 7 days after treatment and no later than 2 weeks before the next appointment.
- Follow any specific instructions from your practitioner: Your practitioner may give you specific instructions tailored to your skin type and the type of treatment you received. Follow these instructions carefully to ensure the best possible results.
- Avoid picking or scratching: It's important not to pick, scratch, or exfoliate the treated area while it's healing. This can lead to irritation, infection, or scarring.

Laser Tattoo Removal

Our innovative approach utilises precise laser technology to safely fade away unwanted tattoos.

Unveil your skin's true potential with Lush Lab Beauty Clinic

Laser tattoo removal is a popular method for removing unwanted tattoos. It involves using highly concentrated beams of laser light to break down the pigments in the tattoo ink. The procedure targets the ink with a high-intensity light beam which causes the tattoo pigment to fragment into smaller particles. These particles are then gradually absorbed by the body and eliminated through the body's natural processes.

How Laser Tattoo Removal works

Understanding the treatment

Laser tattoo removal uses concentrated laser beams to break down the ink in your tattoo into tiny particles, which your body then naturally eliminates. This treatment can significantly fade or completely remove your tattoo.

Preparation before your first session

- Ensure the tattoo area is clean, dry, and free from any products.
- Avoid sun exposure to the tattoo area for at least two weeks prior.
- Stay hydrated and avoid alcohol or blood-thinning medications for 24 hours before your session.
- Apply a numbing cream kept wrapped or covered 1 hour before your treatment.

Session frequency and total needed

The number of sessions varies depending on the tattoo's size, colour, and age, as well as your skin type and the depth of ink penetration. Typically, sessions are spaced 6-8 weeks apart. Most tattoos require several sessions for optimal results.

For specific treatments the results will be explained at the consultation, with an outcome that you and the specialist will achieve.

Before and after laser removal procedure

Aftercare

Protecting the skin for after and in between session

- Avoid exposing skin to UV light (sunlight or sunbeds) or self-tan for at least 2 weeks after treatment. This is to minimise darkening of the skin (hyperpigmentation).
- Avoid heat treatments such as spas, steam rooms and saunas for 7 days.
- Avoid excessive scrubbing or applying pressure to the skin for 4-5 days. This is to allow the treated skin to recover and to prevent any infection.
- Avoid shaving the treated area for 72 hours after treatment.
- Avoid exercising for at least 48 hours.
- Avoid hot baths and hot showers for 48 hours.
- Avoid anything that involves chlorine (e.g. swimming) for 48 hours.
- Avoid make-up on the treated area for at least 48 hours.
- Avoid the application of perfumed products or bleaching creams for 48 hours.
- Avoid scratching the treatment area if blistering or crusting occurs, as this can cause scarring.
- Avoid waxing, tweezing and threading for the complete duration of the treatment course.

Minimal discomfort:

Minimises discomfort, making it an accessible choice for tattoo removal.

Quick sessions:

With fast, efficient treatments, you can easily fit sessions into your busy schedule.

Visible results:

Witness noticeable fading after just a few sessions.

Your Results

Laser tattoo removal results can vary, offering different outcomes:

- Fading Over Time: Each session breaks down the ink, gradually fading the tattoo.
- Partial to Complete Removal: Some tattoos fade completely, while others might only partially fade, depending on ink colour, age, and skin type.
- Number of Sessions: The number of sessions needed varies; results can be seen quickly for some, while others require more.
- Skin Changes: Minor changes in skin texture and colour(known as "frosting") may occur, with immediate effects like redness and swelling, blistering after sessions lasting up to 14 days.
- Aftercare: Proper aftercare is essential to minimise side effects and improve results.

Each session brings you closer to your desired result, tailored to your specific tattoo and skin characteristics.

Price list - Laser Tattoo Removal

(Patch test required before initial treatment)

Treatment area	No of sessions:	1	3	6
Extra Small (1-3cm)		£45	£130	£255
Small (4-8cm)		£80	£225	£450
Medium (9-15cm)		£120	£340	£680
Large (16-35cm)		£200	£675	£1140
Extra Large (36cm+)		Consultation required		
Eyebrows		£100	£300	

Semi-Permanent Eyebrows

Semi-permanent hyper realistic eyebrow tattoo.

Enhance your brows with a semi-permanent hyper realistic eyebrow tattoo

Semi-permanent eyebrows are a popular beauty trend. Instead of daily filling, you can enjoy waking up to symmetrically defined and beautifully shaped brows.

A pigment is inserted into the top layer of your skin giving you brows that can last 1-3 years.

Why should I get semi-permanent brows?

There are many reasons why people choose semi permanent eyebrows:

- Sparse brows with very little definition
- To create a desired shape
- Precise application for those with trembling hands or visual impairments
- Naturally defined brows without any makeup

How it works?

Typically the procedure takes up to two hours with a top-up required after 6-8 weeks. This top-up is to ensure that you are completely satisfied with the brow colour and to add additional hair strokes/further define the previous brow strokes.

SPMU brows lasts between 12 to 18 months and requires touching up more frequently in comparison to other brow treatments.

Microblading

Combination Brows

Ombre Brows

Powder Brows

The procedure is virtually painless and with most, no swelling, but may cause slight reddening of the skin that should disappear in 30 minutes (see our before and aftercare instructions).

Suitable for all skin types – oily, thick or sun-damaged skin, dry.

How many sessions will I need?

Typically 2 sessions are enough and the results can last anywhere from 1 to 2 years, depending on different factors and lifestyles. However, a touch-up once a year is recommended to retain the shape and saturation of the pigment.

After your treatment

Immediately after the procedure your colour will appear darker 40% and more intense but will lighten with the healing process. Try to keep out of sun and water for the first 24 hours.

Are there any side effects?

Mild redness or swelling may occur for the first couple of days depending on the area treated, but normal activity can be resumed immediately following the procedure.

Your results

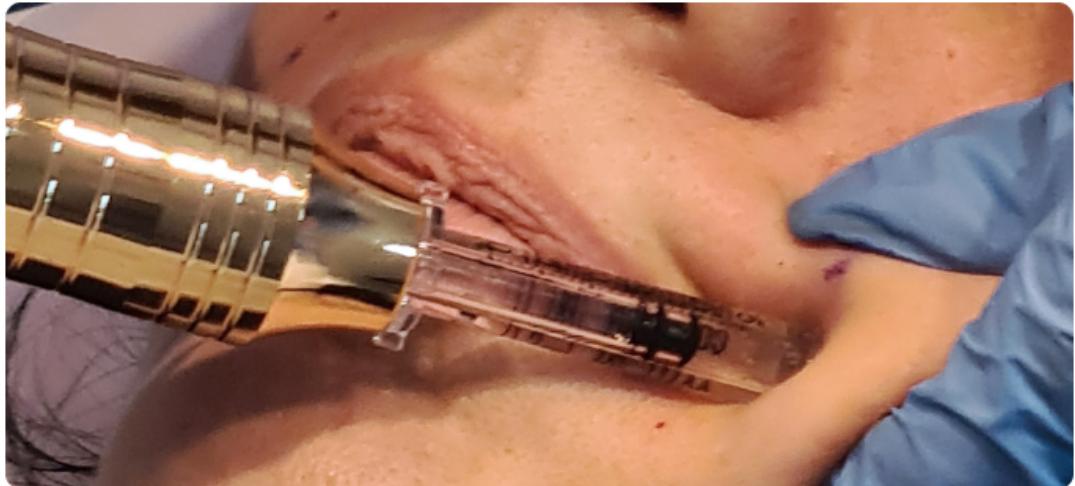

The end result will leave you with personalised eyebrows complimenting your face and skin tone, and restore the appearance of realistic-looking brows.

Price list - Semi-Permanent Eyebrows

Your treatment sessions can be paid for in instalments, as arranged with your therapists

Microblading including top-up	£250
Combination brows including top-up	£300
Ombre brows including top-up	£300
Powder brows including top-up	£300
Top-ups	From: £150

Hii-Pen No-Needle Filler

The UK's First Non-Injectable needle-free, non-invasive plumping device that delivers Hyaluronic acid filler to areas of the face with a Hyaluronic pen.

The Hii-Pen Filler, best leading brand providing you the confidence you deserve

Hii-Pen is a needle-free, non-invasive plumping device that delivers Hyaluronic acid filler to areas of the face with a Hyaluronic pen. This air-powered needle-free system is ideal for those that have needle phobias or anxiety and allows you to gain results in a much more comfortable, stress-free way, rather than a conventional hypodermic needle procedure.

- Lips
- Marionette lines
- Nasal Folds

Hii Pen®
NO NEEDLE INJECTION

How it works?

Hii-Pen is a tool to deliver filler, the rather simplistic device that allows generating enough pressure to launch Hyaluron into the dermis layer of the skin.

Hii-Pen has been known in the industry for many years and has collected different names such as Hyaluronic Pen and Hyaluron Pen. This device has been very popular in Germany and Switzerland since 2016/2017 and in the USA since 2018. Since the beginning of late 2016, it has been a growing trend globally and now reaching the U.K.

How many sessions will I need?

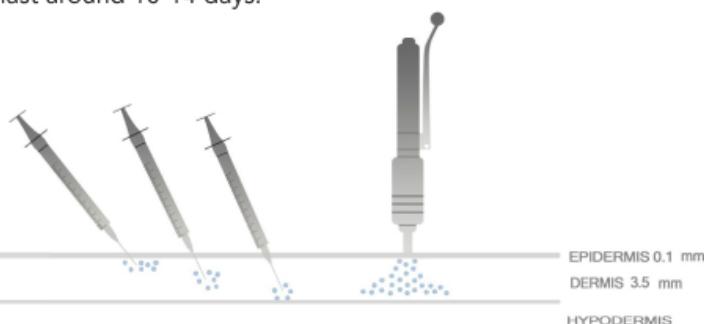

This all depends on the individual's look. Dermalax plus is a filler that allows us to build up to your perfect look.

How long will Dermalax last?

The lip filler can last between 3-7+ months, sometimes a lot longer depending on each individual's diet and routine. Everyone's body will break down the product at different rates.

Are there any side effects?

Possible side effects of the Hii Pen Hyaluronic acid filler may include mild experiences such as bruising, swelling, tenderness and redness. These are the most common and normal side effects of the Hii Pen filler and will subside naturally within a week depending on the individual. Large haematoma (large bruising) can last around 10-14 days.

After your treatment

- Applying ointment to the treated area can help reduce bruising, and speed up the healing process.
- Avoid make-up over the treatment area for 12 hours post-treatment, this will reduce the risk of infection.
- Avoid UV light, saunas, spas, waxing or any further heat treatments for 48 hours post-treatment.
- Ice and cold packs held on the area treated can help reduce swelling and bruising.

Price list - Hii-Pen

Your treatment sessions can be paid for in instalments, as arranged with your therapists
